

Specialty Manufacturing Crossing Gates

6 Series Solid State Crossing Arm

6 Series Solid State Crossing Arm

The 6 series Solid State electrically operated cross arm is designed with simplicity in mind. It has fewer moving parts and is constructed from die cast aluminum and steel that is properly coated for corrosion resistance.

- Extruded high strength plastic arm
- Mounting brackets available for all chassis configurations
- Optional electromagnet available to further secure stowing into the bumper
- Solid State mechanism with no micro switches or relays
- Sealed Bushings
- Internal Grounding
- Available with quick disconnect
- Easy Serviceability

Part Numbers

68106 68150 58150

5.5 Series Sentinel Cross Arm

5.5 Series Sentinel Cross Arm

The 5.5 series electrically operated cross arm is designed with simplicity in mind, with fewer parts making servicing easier. It is constructed from steel that is properly coated for corrosion resistance.

- Features completely sealed potted relays
- Extruded high strength plastic arm
- Mounting brackets available for all chassis configurations
- Optional electromagnet available to further secure stowing into the bumper
- Available with quick disconnect
- Fewer replacement parts and user – friendly wiring make servicing easier
- Easy Serviceability

Part Numbers

58110M 58150 68150

2000 series Air Operated Cross Arm

2000 series Air Operated Cross Arm

The 2000 series air operated cross arm is designed with simplicity in mind, with very few moving parts and a simple air diaphragm which makes this unit virtually trouble free. It is constructed from steel that is properly coated for corrosion resistance.

- Extruded high strength plastic arm
- Mounting brackets available for all chassis configurations
- Optional electromagnet available to further secure stowing into the bumper
- Easy Serviceability

4100 Series Single Pole Cross Arm

4100 Series Single Pole Cross Arm

The 4100 series is a Solid State electrically operated unit that features a single flexible pole that is very durable and rugged for all types of applications. . This unit is designed for rugged service.

- Manufactured from high strength corrosion proof materials
- Modular easy to service drive mechanism
- Urethane mounting blocks available that conform to the profile of the bumper
- Mounting block provides vibration dampening
- Comes with stow guide for secure stowing

732-251-2447

4500 Series Curved Polyrod Cross Arm

4500 Series Curved Polyrod Cross Arm

The 4500 series is a Solid State electrically operated unit that features an extruded plastic arm that conforms to the curvature of the bumper for a snug fit. This unit is designed for rugged service.

- Manufactured from high strength corrosion proof materials
- Modular easy to service drive mechanism
- Curved extruded high strength plastic arm that conforms to the curvature of the bumper
- Urethane mounting blocks available that conform to the profile of the bumper
- Mounting block provides vibration dampening
- Comes with stow guide for secure stowing

4600 Series Straight Polyrod Cross Arm

4600 Series Straight Polyrod Cross Arm

The 4600 series is a Solid State electrically operated unit that features an extruded plastic arm that hugs the bumper for a snug fit. . This unit is designed for rugged service.

- Manufactured from high strength corrosion proof materials
- Modular easy to service drive mechanism
- Extruded high strength plastic arm
- Urethane mounting blocks available that conform to the profile of the bumper
- Mounting block provides vibration dampening
- Comes with stow guide for secure stowing
